

# Copernicus meets Galileo

Earth observation – Navigation – GeoIT

**8 May 2019**  
**Space Night Event**  
**8–9 May 2019**  
**Conference**

Bochum, Metropolis Ruhr, Germany  
Georg Agricola University of Applied Sciences (THGA)

# Earth observation, navigation and geoinformation technology:

Three fields of technology which are to be seen as complementary and are used in many applications in integrated systems. In the area of autonomous vehicles and transportation (land, air, water, rail) and in the broad spectrum of monitoring tasks related to ground movement and ground changes, amongst many others, EO data and high-precision positioning data are used to complement each other. Geodata as well as geoinformation technology systems and solutions are needed for the storage, analysis and provision of data for user applications.

The commercial development of the numerous economic sectors involved requires innovation platforms to transfer technology and knowledge to target applications. Application sectors in this context are the energy industry/renewable energies, mining/post-mining, agriculture/forestry, smart cities/urban monitoring, maritime and inland navigation, water management, environmental and nature conservation, climate protection, transport and mobility.

# The Event – What to expect

The intention is to broaden the scope of the 2018 conference on “**Earth Observation & Copernicus Technologies and Solutions for User Applications**” to include the technology fields of “Navigation” and “Geoinformation Technology”. The conference will

function both as a marketplace and a platform for knowledge transfer between technology experts, service providers and manufacturers as well as users in application sectors and in so doing boost the development.

## Why participate?

- Get the latest information on the European Copernicus Programme
- Meet experts from the technology network “CopServ”
- Establish cross-border contacts for long-term partnerships
- Present, discuss & develop projects at international level
- Meet players offering complementary services & products
- Expand your professional network

**Register now:**

<https://copernicus-meets-galileo.b2match.io>

- 
- Keynotes
  - Specialist presentations
  - Parallel Workshops
    - Matchmaking
  - Space Night Event

# Ticket prices

Regular ticket price

**Conference fee**

120 € incl. VAT

International companies  
(taking part in the brokerage event)

**60 € incl. VAT**

Speakers/Conference partners/  
Start-ups/Students

**free**
